

BUILDING
CONTROL

WELCOME TO BUILDING CONTROL BY EVERGREEN

BuildingControl is an internal platform designed to manage accounts, buildings, staff, shifts, recruitment, time tracking, management visits, and work orders from a single system.

Today, the system already functions as a central operational base, not just an administrative dashboard. The product covers four areas of the business:

- Account and building operations.
- Staff and shift management.
- Recruitment and hiring.
- Daily operational control and tracking.

The system is built with PHP + MySQL, with role/permission-based access control and tenant scoping, allowing users to see only the accounts assigned to them.
